

CHANGE THE NAME OF A TILE (ONE THAT REPRESENTS A PRE-WIN10 APPLICATION)

Right-click on the target tile. An “open file location” button will appear in the dropdown menu. (If the “open file location” button is absent, the tile name cannot be changed.) Click on the “open file location” button. A shortcut for the target application will appear. Right-click on the shortcut and then click on *rename*. Modify or change the name of the shortcut and then close the window. The tile name change will now appear in the All Apps column. **Please note that the names of dedicated Windows 10 Apps cannot be changed.**
