Clean and Sanitize Your PC with PrivaZer

According to nationally recognized tech expert Bob Rankin, PrivaZer is a hard drive clean-up utility on steroids. It gets rid of junk files and wipes away traces of activity that could compromise your privacy. Maybe you think that sounds like some other program you've been using (CCleaner, perhaps), but according to Rankin, PrivaZer does much more. In the following paragraphs, you can learn how it works, and why you may want to try it.

Rankin has reviewed hundreds of free software utilities each year and he has concluded that many are only marginal improvements upon dozens of programs that do essentially the same thing. An increasing number are of the irritating "foistware" genre that attempt to trick the user into "agreeing" to installation of unwanted toolbars, monitoring of your online activity, and so on. It's gotten to the point where you can't just click on "Express install" and let the installation wizard do the rest; you have to watch what an installation program is doing every second, for fear of downloading some third-party programs and add-ons that you don't want.

PrivaZer, according to Rankin, doesn't try to scam or scare you and it does things that no other program does, and does old-hat stuff better than anything that he has ever seen. In addition, it's truly free, with only a humble request for unspecified donations via Paypal!

The "clean and optimize your PC" field has been crowded for years with things like CCleaner, Advanced System Care, and many others. PrivaZer leaves them all gasping in its dust. The first time you run PrivaZer, you will be impressed by the number of clean-up options it gives you. But you won't be confused, because they are clearly and cogently explained. A recommended option doesn't just have the word "recommended" next to it; it includes a brief explanation of why it's recommended and what it will do that's different from other options.

The first scan and clean-up of your desktop or laptop will probably take several hours, not because PrivaZer is slow but because it does an enormous amount of work. Rankin has run Advanced System Care Pro on his machine at least once a week for a long time, but PrivaZer still found about a gigabyte of stuff it could trash or fix.

The fixes are good, too. His computer's performance is snappier than when it first came out of the box.

There's More!

PrivaZer does more than C: drives. It cleans and speeds up external drives, network drives, USB flash drives, SD memory cards, iPods, MP3 players, and just about anything with RAM that you can plug into a USB port on the machine that hosts PrivaZer. Duplicate files, temporary files, log files, unneeded Windows update files are zapped. Even old, festering Windows installs left over from a system upgrade are detected and removed.

In addition to cleaning files and file systems, Privazer does a thorough (but careful) scrubbing of your Windows registry. But just to be safe, you will want to checkmark the "Create a restore point" and "Save registry" boxes before running the scan and clean.

Optionally, you can remove web browsing history, saved passwords, and cookies. If you don't use the Hibernation feature, PrivaZer can disable it and remove the hibernation file, which can be huge. If there's anything there that's unnecessary, or a potential privacy risk, PrivaZer can and will nuke it on demand.

It even comes in a portable version, so you can keep it handy on a USB drive and help out friends who need a good PC cleanup.
