

ESTABLISH A WEBPAGE FAVORITE WITH A KEYBOARD SHORTCUT

How do you establish a Webpage as a Favorite site? Most users venture into the Favorites menu and click Add to Favorites.

There's a faster way: If you have a Webpage open and active, and want to make it one of your favorites, just use the keyboard shortcut. Here's the keystroke combination for all popular browsers:

Chrome: **Ctrl+D**

Firefox: **Ctrl+D**

Internet Explorer: **Ctrl+D**

Edge: **Ctrl+D**

Opera: **Ctrl+D**

Safari: **Ctrl+D**

Vivaldi: **Ctrl+D**

All five major browsers rely on the same keyboard shortcut for bookmarking the current page. Why not **Ctrl-F**, as in 'F' for Favorite or **Ctrl-B** for bookmark? Those shortcuts are typically reserved for the Find function and Boldface function, respectively.
