

## HOW TO DISABLE THE LOCK SCREEN

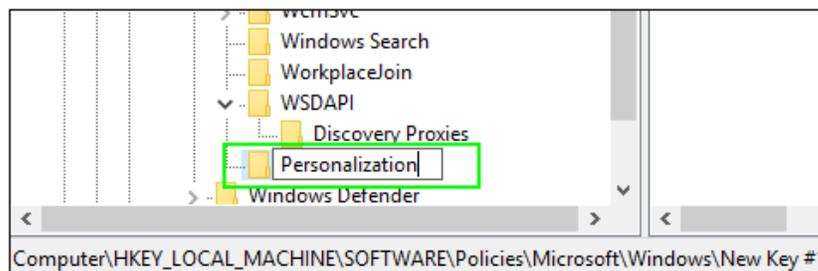

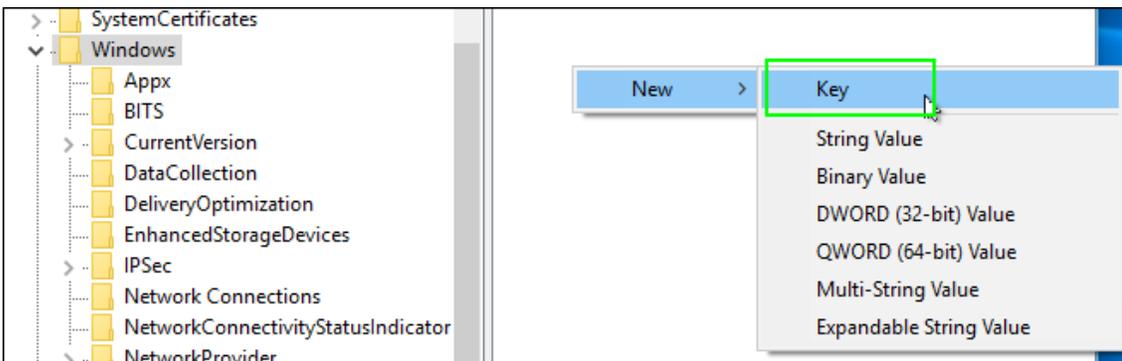

Every time your computer boots or awakes from sleep, you have to click your mouse button to make the **lockscreen** disappear before you get hit with a **login screen**.

You can save time and a click by disabling the lock screen and going straight to the login screen in Windows 10. Here's how.

1. **Open the registry editor.** Hit CTRL + R, then type regedit into the prompt and hit Enter. Click Yes if you receive a warning from User Account Control.
2. Open each folder in this series, one at a time, in this prescribed order:  
**HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows**  
by opening the various folders in the tree.

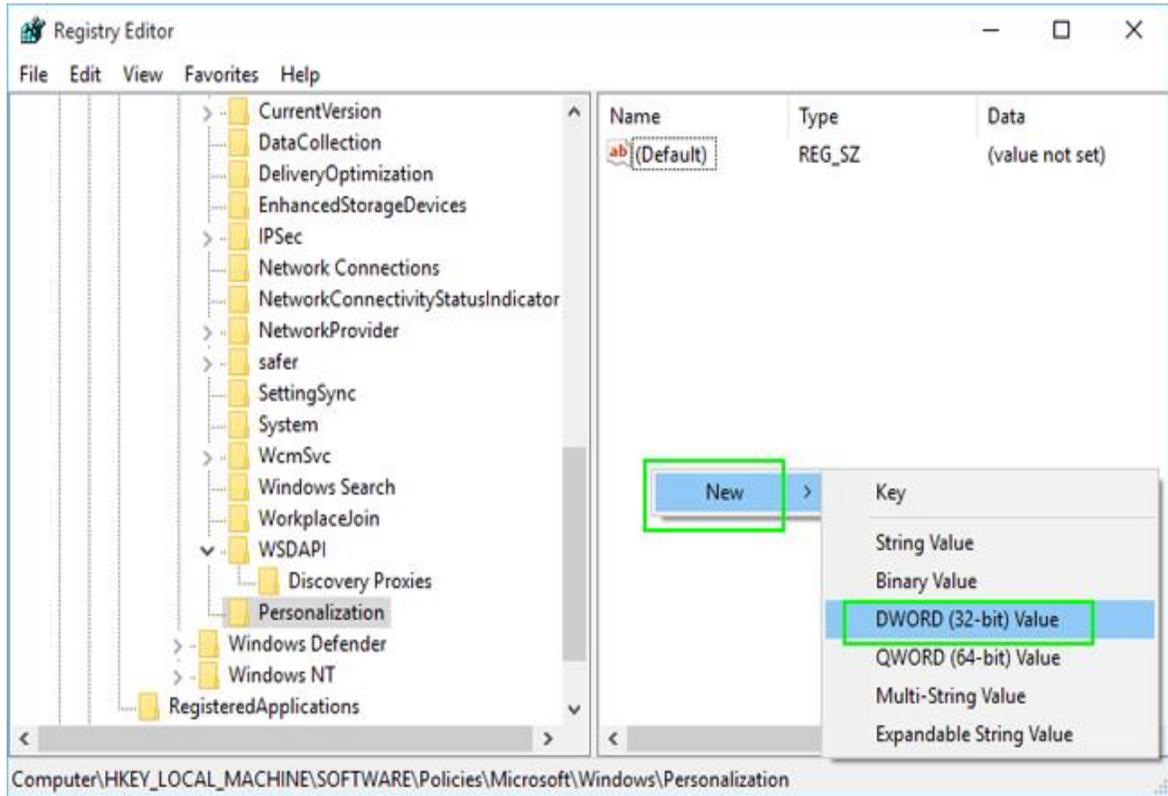

3. Create a new registry key called **Personalization** if one doesn't already exist. To create the key, right click in the right pane, select Key from the menu and then rename the key to "Personalization."

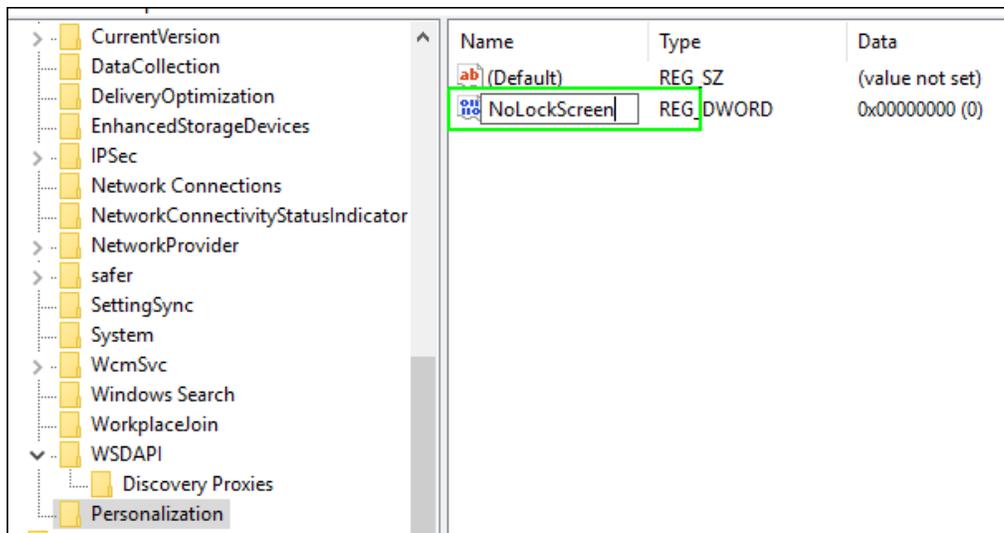

4. Navigate the Personalization key.

5. Right click in the right pane and select New then **DWORD (32-bit) Value**.

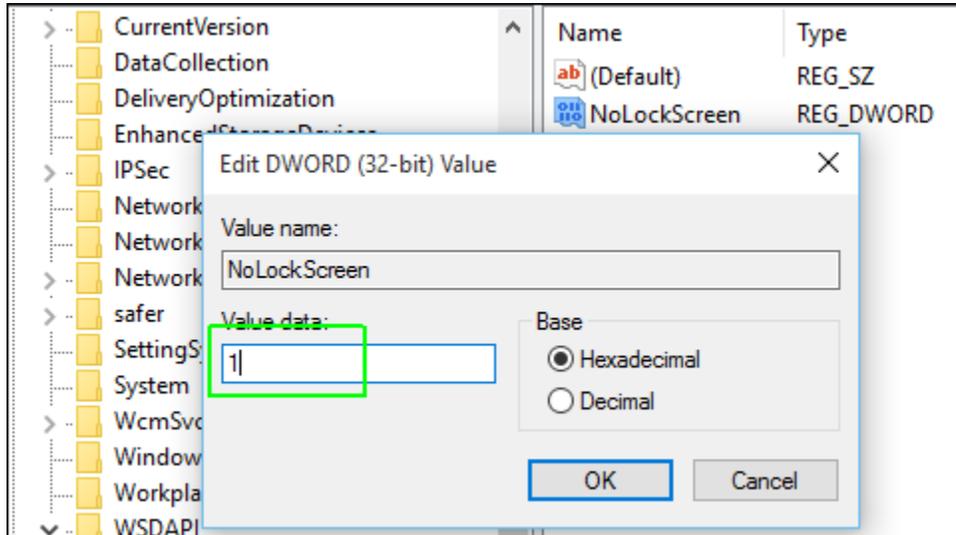

6. Name the new value *NoLockScreen*.

7. **Set NoLockScreen to 1** by double clicking on its name, entering a "1" in the Value data field and hitting OK.

8.

9. After your next reboot, the lock screen will be gone. If you want to re-enable it, just change the registry setting from 1 to 0.
