

## How to Manage Startup Programs in Windows 10's Settings

Windows 10's Settings (Windows + I) now lets you disable the programs that automatically run when you sign in to your computer. This same functionality was previously hidden in Windows 10's Task Manager and was hidden under MS Config in previous versions.

To manage your startup programs, go to Settings (Windows + I) > Apps > Startup.

This feature was added in **Windows 10's April 2018 Update**. If you don't see the Startup option in your Settings app, you haven't installed the update yet.

The changes will be made during a reboot.
