RESTORE YOUR COMPUTER TO AN EARLIER POINT IN TIME

If you think an app or driver that you recently installed caused problems with your PC, you can restore it back to an earlier point in time, called a restore point. System Restore doesn't change your personal files, but it might remove recently installed applications and drivers.

To restore your computer using System Restore:

1. While at the Search box, type *system restore*.
2. Click on Create a restore point that appears at the top of the column.
3. When the dialog screen appears, click on the *system restore* button and follow the prompts.

Note: When you install an application or a driver that Windows recognizes, the operating system will automatically create a system restore point before the application or driver is downloaded.
