

SHOW IMPORTANT APPLICATION ICONS (ANTI-VIRUS, ANTI-MALWARE, FOR EXAMPLE) ON THE TASKBAR'S SYSTRAY

You can easily tweak which application icons appear in the Taskbar's systray.

1. Right-click any open area on the Taskbar and then click "Taskbar Settings."
2. On the taskbar settings page, scroll down toward the bottom and click the "Select which icons appear on the taskbar" link.
3. You'll see a list of application icons. Toggle each one on or off to suit your needs. As you toggle them, the representative icons will either appear or disappear from the system tray.
