

TURN LIVE TILES ON OR OFF

Live Tiles, the tiles on your Start screen that update in real time, come in handy since they display new notifications and information at a glance. Sometimes, though, all those updating tiles result in information overload and slow down your computer. You can turn off a specific tile to keep it quiet. To do this, right-click on the tile and click on the "Turn live tile off" button from the menu bar. If you change your mind, just right-click on the tile and change it back to a Live Tile ("Turn live tile on").
